

InTouch™

Critical Care Bed

Medical

Multi-function foot end touch screen provides ability to collect, display and process patient and bed status information

iBed™ Awareness monitors smart bed positions, providing local or remote alarms if pre-set bed configurations change

Only-in-class, three-zone Chaperone® Bed Exit system monitors patient position, alerting changes via local or remote alarm, and includes spoken patient commands

Protocol Reminders™ help organize and promote compliance with proven best practices

Spoken Language Translations help improve communication with Limited English Proficiency (LEP) patients

On-board Sound Therapy helps promote a soothing environment for patients

Support surfaces can be changed as therapies dictate, and Stryker's powered XPRT™ and PositionPRO® surfaces can be directly controlled by the touch screen

Industry's first USB upgradable bed allows InTouch to be upgraded as best practices evolve over time

A Higher Standard of Care Through Protocol Compliance

InTouch represents a higher standard of care in the ICU, helping to make protocol compliance easier for caregivers. All bed functions are controlled with an easy, intuitive foot end touch screen interface using a powerful on-bed computer. The *InTouch* bed allows you to set Protocol Reminders™ to help make your busy schedule simple, and document each therapy you perform to help reduce paperwork. With a touch, you can see a patient weight history graph of the last 50 weights, and *InTouch* even leads you through each step to assign a Braden Scale assessment to your patient. Pre-recorded clinical phrases in 12 languages help you communicate with Limited English Proficiency patients while Sound Therapy allows you to play music or nature sounds as part of a soothing environment. Real-time information is available from all *InTouch* beds in the ICU, as part of the Connected Hospital® from Stryker.

iBed Awareness alerts you to changes in preset smart bed positions while Protocol Reminders help ensure that best practices, such as patient turns, are done promptly and consistently.

Zoom on *InTouch* features front wheel drive for better maneuverability and a 3.6 mph maximum speed for efficient transport.

Through the intuitive touch-screen interface, caregivers can monitor bed status over time, as well as operate Stryker powered support surfaces.
